

Discover the Difference™

# 309 NEW TRAIL LITE GTX®

## USE:

Durability, protection, support, water resistance for long days in any weather.

## KEY FEATURES:

Versatile hunting boot suitable for mixed grounds and different weather conditions. The particular shape and the inner padding provide high comfort. Hydrobloc® Full Grain Leather upper made of a single piece of leather, with GORE-TEX® Performance Comfort lining inside that guarantees waterproofness. Microtex collar for breathability control and Vibram® Grivola outsole.

<b>MADE IN</b>	ITALY <i>This item has been hand crafted in ITALY by our expert workers to ensure a product of high quality and value.</i>
<b>UPPER</b>	HYDROBLOC® FULL GRAIN LEATHER <i>A carefully selected, premium grade full grain leather which receives the special Hydrobloc® treatment during tanning to ensure maximum water resistance.</i>
<b>HARDWARE</b>	H.R.T. "HIGH RESISTANCE TREATMENT" <i>All our hardware is designed to allow a smooth passage of the laces. D-rings and hooks receive the high resistance treatment to ensure maximum resistance to corrosion.</i>
<b>LINING</b>	GORE-TEX® - PERFORMANCE COMFORT <i>An extremely waterproof and breathable micro porous membrane which can be used to make a lining in outdoor footwear. Its structural characteristics allow moisture from the foot to pass through but keep water out. GORE-TEX® - PERFORMANCE COMFORT is ideal for a wide range of conditions and outdoor activities.</i>
<b>FOOTBED</b>	Z-COMFORT FIT <i>Anatomically shaped removable footbed. It has a quick drying top hygienic polyester fabric layer, to wick away moisture and dry quickly, a latex foam and a bottom cushioning layer in expanded close cell PE. Good overall comfort and cushioning.</i>
<b>PADDING</b>	Z.A.S. "ZAMBERLAN AIR SYSTEM" <i>Zamberlan special construction and design method and choice of components to optimize the comfort and the boot breathability, thanks to a special padding foam. Boots crafted accordingly are extremely light weight and extremely more breathable!</i>
<b>INSOLE/SHANK</b>	ZAMBERLAN Z-FLEX GT <i>Zamberlan® Flex GT is our carefully graded polypropylene midsole specially designed and manufactured for GORE-TEX® lined boots. It offers good support while allowing good, tuned flex for natural movement of foot and a consistent flex pattern across all sizes.</i>
<b>TOE AND HEEL</b>	THERMOPLASTIC <i>The toe puff and heel counter are made from an extruded thermoplastic material which is pre-shaped on special machine. They provide excellent protection for the foot and help maintain a good shape in boot even after extended use.</i>
<b>CONSTRUCTION</b>	GTX BOOTEE <i>The GORE-TEX® membrane is thermo-sealed into a bootee that is then fixed to the boot upper. When the boot is laced, the bootee is fixed to the midsole with a small quantity of glue.</i>
<b>LACING SYSTEM</b>	F.W.S. "FOOT WRAPPING SYSTEM" <i>The F.W.S. is a special construction process used to shape the tongue. The tongue is cut as part of the upper and is shaped using special forms designed and patented by Zamberlan. This forming process eliminates excessive bulk over the foot. Boots using the F.W.S. are more able to perfectly wrap the foot enhancing fit and comfort as well as feel and control in the boot.</i>
<b>WEIGHT (GRAMS)</b>	690 <i>(Half pair size Euro 42 or US 8 Mns - size Euro 39 or US 7 Wms)</i>
<b>SIZES</b>	EU 37-47 (incl. half sizes)
<b>CARE</b>	HYDROBLOC® PROOFING CREAM <i>We recommend regular treatment of the boots with the Hydrobloc® Proofing Cream, to maintain and enhance the performance of full grain leathers.</i>
